## Kinetic Energy Problems

Potentially useful equations:

$$
E_{K}=\frac{m v^{2}}{2} \quad W=\Delta E
$$

## ** show all work.

1. What is the kinetic energy of a 6 kg curling stone travelling at
a) $3 \mathrm{~m} / \mathrm{s}$
b) $67 \mathrm{~m} / \mathrm{s}$
2. What is the mass of an object that is travelling at $15 \mathrm{~m} / \mathrm{s}$ that has a kinetic energy of 524 J?
3. A 37.0 g arrow is shot from a crossbow at $225 \mathrm{~km} / \mathrm{h}$. What is the arrow's kinetic energy?
4. A 2000 kg truck is travelling at $50 \mathrm{~km} / \mathrm{h}$. What is the kinetic energy of the truck?
5. A flee has a mass of 0.002 kg . How fast would it have to fly in order to have the same kinetic energy as the truck in question 4? Convert your answer to $\mathrm{km} / \mathrm{h}$ and comment on the result.
6. A 62 kg person is riding an 8 kg bike. How fast are they travelling if the kinetic energy is 12000 J ? Convert to $\mathrm{km} / \mathrm{h}$.
7. How much work is done by the engine of a 1500 kg car to accelerate it from $4 \mathrm{~m} / \mathrm{s}$ to $18 \mathrm{~m} / \mathrm{s}$ ?
8. A 66 kg person is running with a speed of $2.5 \mathrm{~m} / \mathrm{s}$. The person does 750 J of work during acceleration. What is their final speed?
9. An object has a kinetic energy of 2010 J . How much kinetic energy does it have if it maintains the same speed but the mass is doubled?
10. An object has a kinetic energy of 500 J . How much kinetic energy does it have when the speed is doubled?
